<https://www.linkedin.com/in/eliabe-n-silva/>

Senior Software Engineer • Fullstack Developer • Tech Lead — Angular/Javascript | Java/Spring Boot | Ionic

PROFESSIONAL SUMMARY

Senior software engineer with 10 years of experience in back-end development using Java and Spring Boot, and over 6 years of experience in front-end development with Angular. Strong background in designing microservices and microfrontend architectures, with hands-on experience in real-time data rendering using RxJS, lazy loading, and ag-Grid for high-performance user interfaces. Solid expertise in applying Clean Code, SOLID, DRY, and Domain-Driven Design (DDD) principles. Experienced in cloud architecture (Azure and AWS), CI/CD pipelines, DevOps practices, and application security. Acts as a technical reference, supporting complex problem solving, architectural decision-making, and cross-team collaboration. Passionate about automation, secure development, and building Copilot-based agents to enhance testing, documentation, and team productivity.

PROFESSIONAL EXPERIENCE

Tech Lead and Full-Stack (Angular/Java)— Capgemini

(Salvador, BR (Remote)) Apr 2022 – Present

- Modernized and upgraded a large-scale Exchange Manager platform built on Angular 8+ and Java/Spring Boot—improving performance by **20%** and optimizing JVM resource utilization.
- Worked with Hibernate/JPA, implementing entity mapping, relationships, pagination, and query optimization for relational databases.
- Reduced feature delivery lead time by **75%** and increased activated function points by **40%** by improving CI/CD workflows, refining architecture boundaries, and removing bottlenecks in full-stack delivery pipelines.
- Designed **microfrontend**, **microservices**, and **event-driven architectures** using Kafka, applying **Domain-Driven Design**, SOLID, DRY, Clean Code, **Hexagonal Architecture**, and layered patterns such as Facade, Singleton, and Builder.
- Applied cloud and container architectural concepts including **Docker**, API Gateway routing, distributed tracing, caching, and applied Domain-Driven Design (DDD) and event-driven architecture, with exposure to event sourcing principles, Kubernetes, and Infrastructure-as-Code concepts (Terraform/ARM templates).
- Implemented **secure authentication and authorization** across distributed services using **JWT/OAuth2**, OWASP-aligned secure coding practices, and API hardening strategies.
- Supported production environments with Docker and Kubernetes, handling containerization, deployment configurations, and basic cluster operations.
- Managed application artifacts using **Nexus** Repository, handling versioning, dependency management, and release promotion.
- Developed real-time UI experiences using **RxJS**, reactive state management, and virtual scrolling to handle large data sets with high performance and low memory footprint.
- Built and maintained Angular applications integrated with **Java/Spring Boot reactive REST APIs**, distributed API Gateway patterns, and cloud-native components in **Microsoft Azure**, supported by **GitHub Actions CI/CD** and containerized deployments.
- Led development squads in Agile environments using Scrum, coordinating developers and QA engineers, refining Jira/Confluence documentation, performing technical reviews, and supporting continuous delivery.
- Maintained and optimized legacy **J2EE SOA** systems using **JavaFX**, **EJB** on **WebSphere 8** and **Apache 6+**, ensuring compliance and quality through Fortify/SonarQube analysis and BDD practices.

Software Engineer — Silva and Queiroz Technology Information Services LTDA

(Cruz das Almas, BR) Apr 2018– 2022

- Created **progressive web applications** using **Ionic (v5/v6)**, **Angular 14+**, **RxJS**, **Capacitor**, and **Materialize**.
- Implemented along with backend **microservices** built in **Laravel 9**, **PHP 8**, and **MySQL**.
- Developed and maintained applications using relational databases such as **MySQL/MariaDB**, with adaptability to **PostgreSQL**, **SQL Server**, and **Oracle** environments.

- Utilized AWS cloud services (such as EC2, S3, IAM, Cloud Front, ECS and RDS) to deploy and operate scalable backend applications (adjust services if needed).
- Presented robust solutions supported by **test automation** with **Jasmine** and **Robot Framework**.
- Optimized Angular applications for speed and scalability by implementing lazy loading, change detection strategies, ag-Grid, and advanced caching techniques.
- Delivered Configured and managed deploy using CPanel
- Integrating GCP services (firebase push notifications, authentication and identity platform) with IONIC/Angular applications

Professor Engineer — Federal University of Recôncavo da Bahia

(Cruz das Almas, BR) Apr 2015– 2020

- Taught introductory and intermediate programming concepts using Java, Python, Flask, and C++, emphasizing clean code, software design principles, and problem-solving skills.
- Guided students through requirements analysis, system design, and business communication, simulating real-world software development workflows and stakeholder interactions.
- Delivered structured lessons to 500+ students, strengthening analytical thinking, logical reasoning, and software architecture fundamentals through hands-on projects.
- Designed and supervised practical projects focused on e-commerce systems, leveraging hybrid applications and distributed architectures, integrated with e-NFC, receipt printers, barcode and QR code scanners, and payment machines.
- Created exercises bridging technical implementation and business needs, ensuring alignment between software solutions, operational constraints, and customer experience.

CERTIFICATIONS

- Oracle Certified Associate, Java SE 8 Programmer - 1Z0-808 (2026)
- Java Certified Foundations - Associate - 1Z0-811 (2026)
- Aspiring Architecture — L0 (2025)
- Microsoft Azure Fundamentals — AZ-900 (2023)

SKILLS

Frontend: Angular (6 yrs), TypeScript (6 yrs), JavaScript (7 yrs), RxJS (5 yrs), HTML (10 yrs), SCSS (10 yrs), Chart.js (5 yrs), Ionic (5 yrs), Figma (2 yrs)

Backend: Java (10 yrs), Spring Boot (5 yrs), RESTful APIs (5 yrs), JSON (5 yrs), MariaDB/MySQL (10 yrs), MongoDB (1 yr), Kafka (1y)

DevOps/Cloud: Azure (2 yrs), GCP (4 yrs), AWS (1 yr), Docker (3 yrs), Kubernetes (1y), GitHub Actions (3 yrs), cPanel (10 yrs)

Testing/Quality: Unit Tests (JUnit, Jest, Jasmin, Mockito), Manual & Automation E2E (Cucumber, Gherkin, Postman)

Tools: Jira, Confluence, GitHub, GitLab, Bitbucket, Figma; Copilot Agent Creation; Documentation

LANGUAGES

Portuguese: Native; English: B2; Spanish: A1

EDUCATION

UNIPDS Educação — Postgraduate — Java Elite (Nov 2025)

Advanced modern Java development and architecture (Spring Boot, Quarkus, Kafka, aws, DevOps approaches).

Federal University of Bahia — Master in Computer Science (Jul 2021 – Nov 2024)

Framework to make IoT a reliable data source by integrating devices, blockchain, smart contracts, and ML for data validation.

Information and Management Technology Institute — MBA in Cyber Security (Mar 2018 – Feb 2019)

Researched and applied advanced security strategies to enhance web application resilience.

Federal University of Recôncavo da Bahia — Bachelor in Computer Engineering (Feb 2013 – Aug 2018)

Stress level identification system using ECG, signal processing, and ML to classify stress indicators.
